PARTS BULLETIN No. 1-10

17-02-10

Subject: PVC AIR SEEDER HOSE - 32mm & 63mm No Longer Available

Air Seeders have been using PVC delivery hose for more than 30years, with a very mixed history of performance and reliability. Initially there were no suitable, or economic, alternatives but that has changed in recent years. Rubber hose has become widely available and the price premium has reduced to the point where the increase in durability outweighs the higher initial outlay.

Ausplow have been supplying Rubber Hose exclusively with new machines for some time now and air system problems have been dramatically reduced. Many owners of older machines have taken the opportunity to change to Rubber when their PVC hose has needed replacement. For those owners who have wished to stay with PVC hose, we have continued to maintain stock for as long as possible.

Demand for 32mm and 63mm PVC hose has fallen to the point that our Supplier can no longer service us on an OEM basis. The 32mm hose has been made for us, to fit our moulded hose adaptors, and the minimum order quantities that apply to their factory production can no longer be met. When current stock is exhausted, we will no longer be able to supply 32mm or 63mm PVC hose and Dealers will need to source these products from the various hose re-sellers who still offer PVC air seeder hose.

<u>PVC Hose P/No</u>	<u>Size</u>	<u>Current Stock</u>	<u>Rubber Alternative P/No</u>
5339	32mm	125m	10857
5341	63mm	60m	10858

NOTE: 127mm (5") PVC Hose (P/No 5343) will continue to be used under the Multistream Bins and remains available as a replacement. 127mm Rubber Hose (P/No 10859) will be supplied with all Primary Hose Kits.
