### **Subject:   Auseeder Active Drawbar Arms**

From late this year Ausplow has introduced a new range of Drawbar Arms to enable the Auseeder machine to have the option of an Active Drawbar.

The Current Series II drawbars for the Auseeder will now be replaced by Active Drawbars as a direct replacement. It is expected the Active Drawbar Kit (cylinders, valves, hoses etc) will be ready for purchase by mid 2023.

The drawbars for the Series I Auseeder will continue to be made for individual spare parts orders. The new Active Drawbars will be offered if a LH and RH drawbar set is required for a Auseeder with Series I drawbar arms.

The Auseeder Spare Manual will have the new active Drawbar parts numbers in its next version when released in Jul/Aug next year.
