PARTS BULLETIN No. 18-15

11-12-15

Subject: NEW VERSION 4 DBS AUSEEDER TINE ASSEMBLY

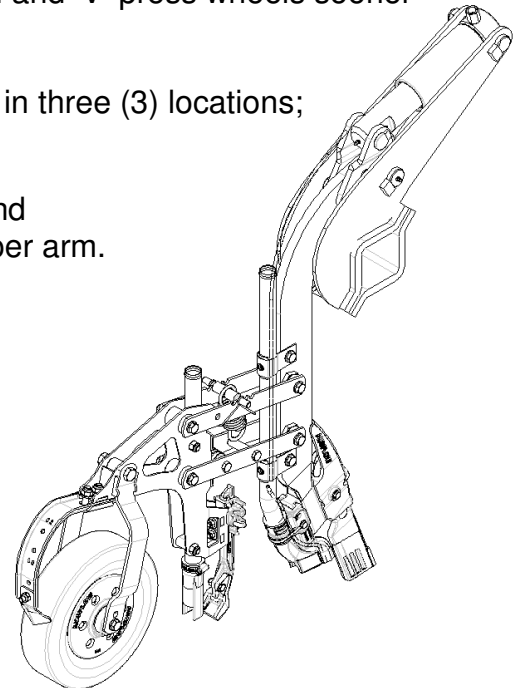

Ausplow will be introducing the new Version 4 Tine assembly in 2016 which will enhance the Auseeder performance.

The new Version 4 DBS Tine Assembly features the following;

- A new designed rib that works more efficiently in wet sticky soil conditions by the re-positioning of the press wheel side arms, and press wheel scraper arm with a more active spear scraper.
- The new rib design will provide greater clearance around the press wheel area, and the ability to spear scrap soil off from a 50mm, 70mm and 'V' press wheels sooner rather than later.
- The Version 4 Tine Assembly has provision for liquid in three (3) locations;
 - Liquid Deep Banding - behind the knife blade;
 - Liquid Seed Placement - behind the seed boot; and
 - Liquid Rear - behind the press wheel on the scraper arm.
- The Version 4 Tine Assembly incorporates as standard the Pro-D Tillage Tools System.

The other advantage of the new rib is its ability to use any size press wheel (50, 70, 90mm or 'V').

The press wheel arms have two holes, the upper hole is for the 'V' press wheel only and the lower hole is used for all other press wheels. These two holes ensure that the correct closing tool height geometry is maintained.

Ausplow would like to gauge interest from spare parts customers for seeding 2016, to facilitate with early ordering of components and assemblies for the upcoming season.

Customers can upgrade to the Version 4 by:

- Purchasing a complete Version 4 DBS Tine Assembly or;
(\$1950.00 RRP Excluding GST)
- Purchasing a base Version 4 Rib Assembly Upgrade Kit as shown.
(\$267.60 RRP Excluding GST)
