Subject: New Pro-D Fertiliser Boot V2 Kit

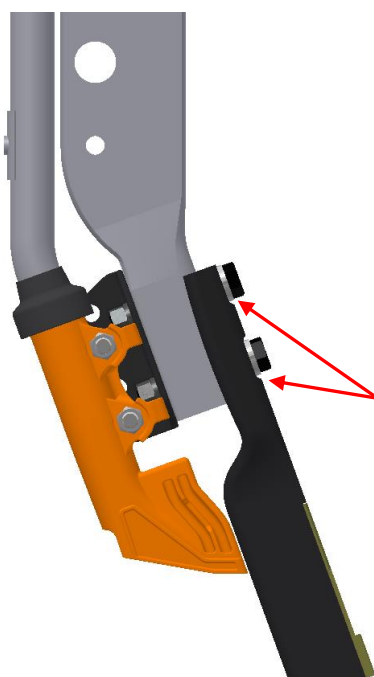

Ausplow has introduced a NEW Pro-D Fertiliser Boot V2 incorporating a wear shield that will replace the current Pro-D fertiliser boot, shield and strap.

The NEW single piece shielded boot, like the current boot, will also allow depth adjustment from 3" or 4". There is now provision to simultaneously fit two 6mm OD liquid friction flow tubes.

The Fertiliser Boot V2 Adaptor is bolted to the back of the shank using the blade bolts and the fertiliser boot is bolted to the adaptor using two of the 4 holes in the adaptor depending on the 3" or 4" depth setting required.

Fitting the fertiliser boot to the tine assemblies will require the 32mm stainless steel fertiliser tubes. The lower fertiliser tube clamp is now removed. The rubber Fertiliser Boot Protection Cap is fitted first to the fertiliser tube prior to attaching the boot.

The new Fertiliser Boot V2 can also be used on tine assemblies that have DBA blades and the stainless fertiliser tubes fitted.

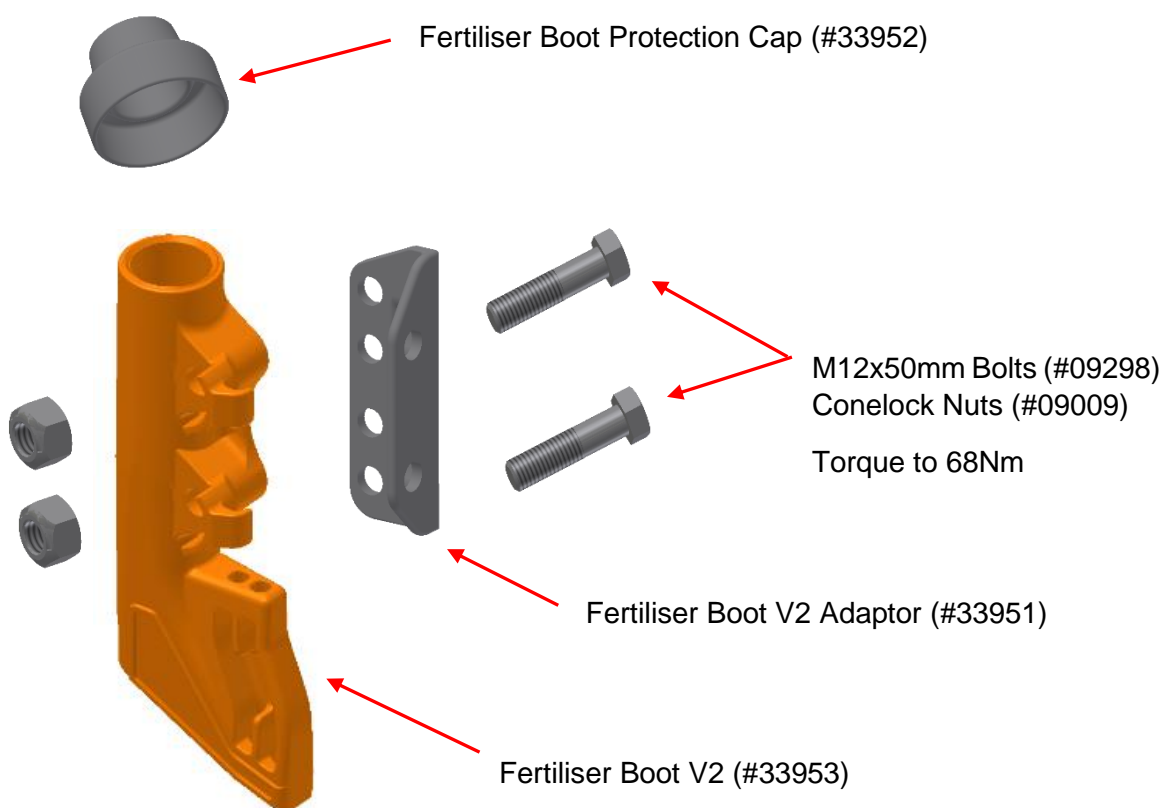

When fitting the adaptor, two #09031 M12 Flat Washers will be required and placed under each blade bolt head to ensure the DBA blade bolts do not interfere with the boot fitting on the adaptor.

The Pro-D Fertiliser Boot V2 Kit will be available from Feb 2022.

#03136

Pro-D Fertiliser Boot V2 Kit

RRP \$78 excl gst

The existing fertiliser shield, boot and strap will be available as a spare part until stocks run out.

Please Note:

The new V2 Fertiliser Boot and its adaptor are not interchangeable with the existing shield, boot, and adaptor.
