Subject: Washer Removed 01230, 11477 & 11940 Kits

Tine assembly side arms use M12 bolts in #01230 Bolt sets. These bolts are now slightly shorter than those used in previous tine assemblies.

This means only one #09031 M12 washer is now required in Bolt set #01230 and the following kits have had the washer near the bolt head removed to reflect this:

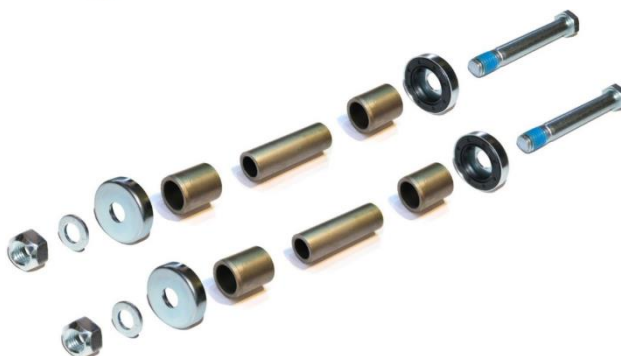

01230 Bolt Set M12 x 90 Thread Lock

11477 Shank to Side Arm Bush Kit

11940 Seeding Unit Rib Pivot Kit

Please note the RRP for these kits remains the same. Existing Sales Orders for these kits may have been sent with the extra #09031 washer which can be discarded.

#09031 washers can still be ordered separately as required.
