## **PARTS BULLETIN No. 2-07**

**05-12-07**

### **Subject: AUSEEDER DBS TINE ASSY – 2007**

A new style of DBS seeding unit was introduced on Auseeder Machines shipped from the factory in January 2007.

While the basic patented design remains unchanged, there were a number of detail changes introduced.

- (1) The fertiliser tube is now 32mm stainless steel tube with two retaining clamps. It is longer at the bottom.
- (2) The fertiliser boot is shorter and is now fitted as standard. It does not require the support finger used with the previous boot.
- (3) Construction of the seed tube and rib assembly has been changed. They are now separate items. The removable seed tube is now 32mm stainless steel.
- (4) The 32mm airseeder hose now fits directly to the fertiliser and seed tubes and is retained with a hose clamp. The moulded adaptor and clamp used previously are no longer required.
- (5) The longer parallelogram side arms with four spring pin notches are now standard. The original shorter arms are still available as an option.
- (6) The wider press wheel arms for mud clearance are now standard.
- (7) The rear mounted scraper is now standard.
- (8) Four press wheel options are available; 50, 70, 90mm & "V".

A laminated parts breakdown and listing of this assembly with a 50mm press wheel and 7" blade is enclosed.
