

## PARTS BULLETIN

No: 5-23

14/8/23

### Subject: NEW SCRAPER ARM

The current scraper arm has now been shortened in length to improve the scraper efficiency and increase the arm's robustness.

The new scraper arm is backwards compatible with the previous arm and therefore has the same part number #33477. The scraper arm kit #27491 (scraper arm with block) is also backwards compatible.

The new shorter scraper arm (shown below) will be supplied from August onwards when stocks of the current longer arm are depleted.

#33477

#27491

Also, this is a reminder that any customers who currently have a bar with a complete set of the old type of scraper arms with mount plate (shown opposite) can upgrade to the new scraper arm kit #27491 at a special discounted price.

See Parts Bulletin 4-20 for details on how to order and the information required to be eligible for this offer.
