Subject: Revised Pricing for tungsten related products

Ausplow has secured an alternative manufacturing source for tungsten products while continuing to work closely with our existing long-term supplier. This ensures that the design, quality, and performance standards that customers expect from Ausplow GET products remain unchanged.

As a result, we have been able to reduce the impact of ongoing global tungsten price increases, which continue to affect the market.

We are pleased to advise that we can now revise pricing on products that utilise tungsten carbide, with reductions of up to 30% on selected items. While the tungsten market remains volatile, we will continue to closely monitor raw material costs and supply conditions and make pricing adjustments where appropriate, without compromising product quality.

To support fair allocation and maintain product availability for all customers, order quantities will continue to be monitored.

We can also confirm that these GET products with tungsten are now eligible to be ordered through Weekly Stock Order and qualify for the 25% WSO discount.

The revised pricing is effective immediately and has been updated in our Webstore.
